Summary

My passion with computers was born while I was a student in 5th grade. Curiosity of how things work overwhelmed me, so I started spending my free time reading blogs and being active on a few different forums that I found interesting back then. However, it was not until 2014 that I actually started learning programming. Since then I've been working on different university projects and projects of my own including, but not only, a simple game I developed for the google play store, just because I wanted to understand how the whole process of developing and publishing a product works. I am always eager to learn new things and looking for a place to start off my career as a software developer.

Skill Highlights

- C#
- JavaScript
- SQL
- Java
- HTML
- Natural curiosity
- PHP
- CSS
- Fluent English (CAE)

Experience

- **Software Support Engineer** October 2016 to Current
